FYIPGPE SYLLABUS

Semester – I

Paper – I,4

MATHEMATICS – I

Unit-I

The real-number system – the concept of set – \mathbb{R} – functions – types of functions – rate of change and the derivative – the derivative and the curve – the concept of a limit – inequalities and absolute values – \lim – sequence – the continuity and differentiability of a function – rules of differentiation – partial differentiation – determinants

Unit-II

Differentials – total differentials – the differential – the derivative – derivatives of $\sin x$, $\cos x$ – exponential and logarithmic functions

Unit-III

Optimization – relative maximum and minimum – second order derivative test – Maclaurin and Taylor series – Optimization conditions – extreme values of functions of two variables – Effect of constraint – finding stationary values – quasiconvexity – Quasiconvexity - Least cost combination of inputs.

Unit-IV

Dynamics and integration – Indefinite integrals – $\int u^m dx$ integrals – Improper integrals – some economic applications of integrals – The definite integrals

Unit-V

Analytic geometry – straight line – various forms of equation of straight line – parabola and its properties

Text Books:

1. Alpha C. Chiang, Fundamental Methods of Mathematical Economics (Third Edition), Mc Graw Hill International Editions – Economics Series
For Unit-I: Section 2.2 to 2.5, 4.2 to 4.7 and 7.1 to 7.6
For Unit-II: Sections 8.1 to 8.5 and 9.1 to 10.7
For Unit-III: Sections 9.1 to 9.5, 11.1 to 11.6 and 12.1 to 12.7
For Unit-IV: Section 13.1 to 13.6
2. R.G.D. Allen, Mathematical Analysis for Economists, AITBS Publishers and Distributors, Delhi.
For Unit-V: Section 3.1 to 3.8

FYIPGPE Syllabus
Semester – II
Paper – 2.4
BASIC STATISTICS

Unit - I

Definition, applications and limitations of statistics. Planning and execution of a statistical survey. Primary and secondary data. Different methods of collecting primary data. Drafting and pre-testing of a questionnaire. Sources of secondary data. Editing of primary and secondary data.

Census versus sampling method. Judgment, quota, convenience, simple random, stratified, systematic, cluster and multistage sampling methods. Sampling and non sampling errors.

Unit - II

Meaning and objectives of classification. Geographical, chronological, qualitative and quantitative classification. Formation of discrete and continuous frequency distributions. Significance of diagram and graphs. One and two dimensional bar diagrams and pie diagrams. Graphs of one and two or more variables. Histogram, frequency polygon, frequency curve and ogives.

Unit - III

Requisites of a good average. Computation, merits, demerits and uses of arithmetic mean, median, mode, harmonic mean and geometric mean.

Significance of measuring variation. Requisites of a good measure of dispersion. Computation, merits, demerits of range, quartile deviation, mean deviation, standard deviation and coefficient of variation. Lorenz curve.

Difference between dispersion and skewness. Karl Pearson's and Bowley's coefficients of skewness. Moments about origin and central moments. Kurtosis based on moments.

Unit-IV

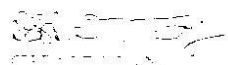

Use of index numbers. Classification of index numbers. Methods of construction of index numbers. Unweighted index numbers. Quantity and value index numbers. Tests of adequacy of index numbers. Chain index numbers and their construction. Base shifting. Splicing and deflating of index numbers. Consumer index numbers and index numbers for industrial production.

Unit-V

Utility of time series analysis. Components of a time series. Measurement of trend by graphic, semi-averages, moving averages and least squares methods. Measurement of seasonal variations by simple average, ratio-to-trend, ratio-to-moving average and link relative methods. Measurement of cyclic variations by residual method. Measurement of irregular variations. Forecasting the future values in the time series.

FYIPGPE Syllabus
Semester – II
Paper – 2.5
MICRO ECONOMICS - I

Unit-I

Definitions of economics, scope of micro economics, basic concepts : Scarcity, marginal, incremental, opportunity cost, risk, uncertainty, positive and normative economics, static and dynamic economic analysis, inductive and deductive methods, partial and general equilibrium, market period, short period and long period, Average revenue and marginal revenue.

Unit-II

Consumer behavior analysis: Demand: Types of demand, Elasticity of demand: Price, income and cross elasticity. Relationship between average revenue, marginal revenue and price elasticity. Measurement of elasticity, influencing factors of elasticity of demand and its uses. Cardinal and ordinal utility analysis. Separation of price effect (Hicks and Slutsky methods), consumer's surplus, Revealed preference theory, Modern utility index.. Concept of demand forecasting.

Unit-III

Cost analysis: Nature of total cost, total fixed cost and total variable cost, average fixed cost, average variable cost, average cost, in the short run. Marginal cost and relationship between MC and AC. Derivation of long run average cost curve. Opportunity cost, explicit and implicit cost, real cost, separable and non-separable cost, historical and replacement cost. Cost functions.

Unit-IV

Production analysis: Concept of production function. Law of diminishing returns and its applications. Iso-product curves; properties of iso-product curves, producer's equilibrium, expansion path, economic region of production, returns to scale. Supply function, elasticity of supply and economics of scale.

Unit-V

Market structure analysis: Meaning of market, types of markets i.e. Local, regional, national and international market. Perfect competition: features, price-determination in the short run, shape of revenue curves, equilibrium conditions of firm, equilibrium output determination in the short run. Price determination in the long run under different cost conditions. Equilibrium output determination in the long run.
